QUESTION: 55

A consultant for an airline needs to federate some content from their IBM Content Manager OnDemand (CMOD) system into their IBM Content Platform Engine system. Which of the following web based user interfaces only supports downloading the federated content from CMOD but not viewing it?

- A. IBM WEBi
- B. Workplace
- C. Workplace XT
- D. IBM Content Navigator

Answer: C

QUESTION: 56

A deployment specialist running configPE.bat(CPIT) in an IBM WebSphere Application Server (WAS) environment installs IBM FileNet Content Platform Engine V5.2 in a Microsoft Windows environment. It fails giving an out-of-memory error. The java.lang.OutOfMemoryError: Java heap space error message in the SystemOut.log file for WAS indicates that the Java VirtualMachine ran out of heap space. As a deployment specialist, which two following steps need be taken to address this issue?(Select two.)

- A. Do not replace or change the cpit.properties file.
- B. Run 5.2.1-CPIT-WIN.exe after emptying the recycle bin.
- C. In WebSphere Admin console enable Verbose Garbage collection.
- D. Do not delete the Tivoli Directory Services, CE, WAS and Workspace XT subfolders from decompressed folder.
- E. Increase the maximum and minimum heap sizes for the Java Virtual Machine on the system where the Composite Platform Installation Tool ran.

Answer: B, E

QUESTION: 57

A company is upgrading their IBM FileNet P8 environment to Content Platform Engine (CPE) V5.2.1 on the same system where the Content Engine was previously installed. Which of the following steps is required to upgrade to CPE V5.2.1?

- A. Upgrade to the latest version of the application server.
- B. They must upgrade to Microsoft.NETFramework V4.5.2.
- C. Logon as the same user who originally installed that software.
- D. Stop the application server process before running the CPE V5.2.1 installer.

Answer: D

QUESTION: 58

During the weekend, when there is little to no user activity on the Content Platform Engine server, the FileNet specialist submits an indexing job for a document class that has 2 million documents. What file should the FileNet specialist review to help gather information during indexing, e.g. memory usage and queue size, about the IBM Content Search Services server?

- A. monitor*.csv
- B. adminAudit.csv
- C. systemevents.log
- D. serverConfiguration.log

Answer: D

QUESTION: 59

A FileNet consultant is performing steps to enable Kerberos authentication on an IBM WebSphere Application Server. The consultant is reviewing the FileNetP8KerberosService configuration in the Application Logins and notices the login modules are missing. Which two of the login modules below should be present? (Select two.)

- A. com.filenet.engine.authentication.LoginModule
- B. com.ibm.ws.security.filenet.server.LoginModule
- C. com.ibm.ws.security.server.lm.ltpaLoginModule
- D. com.ibm.ws.security.server.lm.wsMapDefaultInboundLoginModule
- E. com.ibm.wsspi.security.common.auth.module.IdentityAssertionLoginModule

Answer: A, C

QUESTION: 60

Users in a legal department are unable to perform a content based search successfully. The administrator checks the document classes in Administration Console for Content Engine and confirms that they are CBR enabled. During the administrator's troubleshooting it is discovered that the index is corrupt. The administrator reviews remediation steps, such as reindexing, to fix the corrupt full-text index.

What else can the administrator do to help identify document-related index failures?

- A. Review the UNRECOGNIZED_EXTRACTION log for the index errors.
- B. Set the “Text Extracted” property on the document class that is going to be indexed.
- C. Select “Propagate” to source in the Indexing failures recording level on the object store.
- D. Use the IBM Content Services command-line administration tool to help identify failures.

Answer: C
